

ABSTRACT OF THE DISCLOSURE

The image printing system of the present invention includes an image editing device that carries out editing and printing of images; a link processing device that allows obtaining a desired image by linking to a WWW server that provides the image to be
5 edited and printed in the image editing device; a record search device that tabulates records of editing and printing processing that has been carried out using the image editing device on the images obtained from the WWW server; and a link destination selection device that selects link destinations in the link processing device based on the tabulation results of the record search device and reports this to the link processing
10 device. The link processing device sets the link destinations based on the link destinations reported from the link destination selection device.
